

Document and Version Control Policy

RELEVANT STANDARD(S):

Standards for Registered Training Organisations (RTOs) 2025	▪ Outcome Standard 4.1 – Governance and Accountability ▪ Outcome Standard 4.3 – Risk Management ▪ Outcome Standard 4.4 – Monitoring and Continuous Improvement ▪ Outcome Standard 1.3 – Assessment System Integrity ▪ Outcome Standard 1.5 – Validation and Quality Assurance
---	---

Purpose

The purpose of this Policy is to establish a structured and risk-based framework for the control, version management, approval, storage, publication, review, and archiving of all controlled documents used within SNS College of Western Australia.

This Policy ensures:

- only current, approved documents are used in training, assessment and operations;
- document changes are authorised, traceable and risk-classified;
- governance records are system-based and auditable;
- regulatory compliance and audit readiness are maintained; and
- document lifecycle management supports continuous improvement.

This Policy supports the integrity of the RTO's assessment system, governance systems, and compliance obligations under the Standards for RTOs 2025.

Policy Principles

Principle	Policy Intent (What we commit to)	Governance & Evidence
Single Source of Truth	All controlled documents are created, approved, stored and managed within Microsoft SharePoint as the official Document Management System (DMS).	SharePoint version history, metadata fields, permission settings, audit logs
System-Based Register Model	SNS does not rely on a manually maintained document register. The authoritative document register exists within SharePoint metadata and version history.	Live filtered view (Status = Current), metadata export, dated register snapshot
Defined Ownership	Every controlled document must have a designated Document Owner responsible for accuracy, review and initiating updates.	Metadata field: Document Owner
Authorised Approval	No document may be published as "Current" without formal approval by the relevant authority.	Metadata: Approval Authority, Approval Date
Risk-Based Version Control	All document changes are classified as Major, Moderate or Minor and approved accordingly.	Version number structure (X.0 / X.1 / X.01)

Traceability and Transparency	All controlled documents must display version number, document ID, approval authority, review date and status.	Footer controls, revision history table
Controlled Access	Only authorised personnel may edit controlled documents. Uncontrolled copies must not be used for delivery or compliance purposes.	SharePoint permissions and check-in/check-out controls
Lifecycle Governance	Superseded documents are archived and retained in accordance with regulatory retention requirements.	Archive library, metadata status update
Continuous Monitoring	Document control performance is monitored through live register queries, internal audit and management review processes.	Quarterly export, CI Register entries

Controlled Documents

This Policy applies to all RTO-controlled documents including, but not limited to:

- Policies and Procedures
- Training and Assessment Strategies (TAS)
- Assessment tools and mapping documents
- Validation plans and reports
- Registers and governance documents
- Forms and templates
- Marketing materials referencing nationally recognised training
- Learner and trainer handbooks
- Credential and workforce records

Version Classification Framework

SNS College applies the following version classification:

Change Type	Description	Version Format	Approval Authority
Major Change	Regulatory, legislative, assessment integrity, TAS or compliance-impacting change	X.0 → X+1.0	CEO
Moderate Change	Content clarification, structural adjustment, additional guidance not affecting compliance	X.1 → X.2	RTO Manager

Minor Change	Typographical or formatting corrections only	X.01 → X.02	Compliance Manager
---------------------	--	----------------	--------------------

Major changes may require validation or review under Outcome Standard 1.5 where assessment tools are impacted.

Live Document Register Model

SNS College operates a **system-based live document register model**.

The official register of controlled documents is maintained through SharePoint metadata and version history.

At any point in time, a live register may be generated by:

- filtering SharePoint library by **Status = Current**;
- displaying required metadata columns (Document Owner, Version, Approval Authority, Next Review Date);
- exporting the filtered view to Excel; and
- recording the export date.

The exported document becomes the official governance snapshot as at the export date and may be retained as audit evidence where required.

Manual registers are not considered authoritative.

RTO Responsibilities

Role	Responsibilities
CEO	Approves major policies and system-level documents; ensures governance integrity.
RTO Manager / Compliance Manager	Oversees document lifecycle governance; ensures metadata integrity; approves moderate updates; conducts quarterly compliance checks.
Document Owner	Drafts and updates documents; ensures alignment with legislation and training products; initiates review cycle.
Training Manager	Ensures assessment tools and TAS reflect correct and current versions.
Administration Team	Publishes approved documents; updates metadata; archives superseded versions; manages SharePoint permissions.
All Staff	Must access and use documents only from SharePoint; must not store controlled documents locally or distribute editable copies via email.

Monitoring and Improvement

SNS College will:

- conduct quarterly SharePoint register reviews;
- verify that all “Current” documents have valid approval authority and review dates;
- monitor upcoming review dates through metadata queries;
- record any document control issues in the Continuous Improvement Register;
- review this Policy annually; and
- update this Policy where legislative, regulatory or governance changes occur.

This supports Outcome Standard 4.4 – systematic monitoring and evaluation.

Version Control

Version Control Table					
Date	Summary of Modifications	Modified by	Version	Date of Implementation	Next Review Date
24/02/2026	Initial creation – Integrated Document and Version Control Policy aligned to Standards for RTOs 2025	Compliance Manager	V1.0	24/02/2026	24/02/2027
